

# Business Process Management Solutions

## Case Study

ACME.com

Application development and support for managing Business Process of an organization.

### Region

UK  
Europe

### Sector

Automotive

## About the application

ACME.com is a solution to for business users to structure and implement business processes for any industry and domain. It can be configured and used to work across functional areas, business units, and diverse stakeholders. It manages all documents, data, and work activities while automatically collecting and building the evidence in a real-time repository, for obtaining any type of compliance.

## Challenges

- Lack of in-depth knowledge about compliance standards and common business workflows.
- Lack of reporting & analytical matrix to measures the performance of business processes.
- Lack of Data Migration features to migrate existing data from test to production environments.

## Scope

The scope of the project was to understand the solution to help transition and build a comprehensive offshore team to take-up all the project deliverable responsibilities.

## Solution

- Introduced enhanced workflows that allow customer to perform conditional based auto-assignments of Business Process.
- Define custom templates to generate multiple reports for varied datasets.
- Creates dashboards to graphically display statistical information used for analyzing and forecasting trends to make informed decisions.
- Introduced features to help customers migrate the tested and validated data from test to production environment by saving the time and resources.
- Automated import processes to regularly update Compliance Standards in the solution.
